To: Jose Torres/R6/USEPA/US@EPA

Mr. Torres,

It is my understanding that the Environmental Protection Agency can over see some of the other State Agency actions. I am writing to request that your agency do a complete review of the proposed chemical injection wells in Montgomery County Texas. The following is a copy of an e-mail that I sent to the Lt. Governor.

---

I am appalled that these injection wells have received an approval by those who are employed to serve and protect the citizens of our great State of Texas. Who is it, if not the TECQ who is to protect our natural resources? With even the slightest chance of contamination there should have been no approval offered.

There are **FIFTY-FOUR Counties** who receive water from the aquifers that run through the proposed sight. I am not sure of the number of people affected but it is in **the tens of millions**.

What steps will my State of Texas put in place for the supply of water when any one of the injection wells has a fault or a slight leak? If you think that the floods, fires, other natural disasters have been expensive and difficult to deal with, imagine what it will be for this man made disaster, approved by the government! I am disappointed that the interests of one business have been put above the interest of the people of this state.

Please review all of the information and explain to the citizens why this should have been approved. Next, maybe you would like to purchase my home and my business. I take my chances with Mother Nature and with man on the roadways, but I will not risk my water being contaminated for one company's profit.

---

There is an active group, C.R.O.W. looking out for my rights and attempting to protect my health, investments, lifestyle..... I am now looking to my State of Texas to assist in protecting myself and my children.

Would you please put a review of this TECQ permit high on your office agenda for review and let each of us know what further steps we may take. Obviously, I would rather not move, but I will if these wells start operation. I only hope that I can sell my home fast enough!
